

THE CHASE FOR DEEP GOLD IS NOW MORE REWARDING.

The newest additions to the GOLDSTALKER™ series take superior performance and ramp it up even more. Offering excellent search capabilities over large open areas, these coils not only see more ground with each swing, they give maximum depth penetration to find the lodes the others miss.

22" ROUND

Weighing in at only 1110g, this large coil is very lightweight for its size and makes light work of searching large areas. It offers a good stable threshold in most circumstances plus the best depth capabilities of the round coils. Although suited to larger, deeper targets, it still impresses with its sensitivity; during testing it found 2g pieces at approx 25cm deep.

Size: 540mm Weight: 1100g / 38.8oz

24 X 14" ELLIPTICAL

The largest of our elliptical coils features a new, broader shape. This increase in width compared with the standard 24"x12" adds to the coil's depth capabilities and gives better overall performance. As with all the elliptical coils, the narrow ends provide good pinpointing ability and manoeuvrability through more dense terrain. Great as a patch finder or a general search coil, it also picks up smaller targets closer to the surface. Lightweight for swinging all day, it's perfect for searching for a good cross section of targets.

Size: 590mm x 345mm Weight: 1018g / 35.9oz

COIL TYPE	CONFIG.	WATER RESISTANT	WATERPROOF	SENSITIVITY	DEPTH	BEST SUITED TERRAIN	MINERALISATION LEVEL*
Gold Hunting Coils							
22" GOLDSTALKER™	Mono	yes	no	fair	excellent	open field	medium
24 x 14" GOLDSTALKER™	Mono	yes	no	good	excellent	open field / light scrub	medium

Mono coils are more sensitive and have better depth than an equivalent DD coil and penetrate with a cone shape like effect. They can become unstable in highly mineralised soils. *Mineralisation levels listed are based on using a GPX4500 detector and may vary with other models.

All weights and measurements are approximate. Weights include a standard skid plate. The information provided is to be used as a guide only and may vary depending on the detector used and the conditions experienced. Further advice can be obtained from your nearest dealer.
